

JULIO HIDALGO

AUTOMATION & AI SPECIALIST

Workflow Automation • AI Integration • Power Automate & Python

Quetzaltenango, Guatemala • Open to Remote Roles • julio.1995.hidalgo@gmail.com • +502 3940 4618

[Portfolio: julio0795.github.io](https://github.com/julio0795) • [LinkedIn: in/julio-hidalgo](https://www.linkedin.com/in/julio-hidalgo)

PROFILE

Automation specialist who builds AI-powered systems and tools that eliminate manual work, reduce errors, and help businesses scale without adding headcount. Backed by 4 years of Tier 1–2 IT support, I understand how businesses actually run and where the real friction lives before I build a solution. I design end-to-end automations and integrate AI into real workflows — from intelligent document pipelines and trading automation to WhatsApp assistants and real-time AI co-pilots — owning architecture, debugging, and delivery. I work in an AI-native workflow (Cursor, ChatGPT) to ship reliable solutions fast.

TECHNICAL SKILLS

Automation & Platforms: Power Automate, MS Exchange, cTrader API, Telegram Bots, WhatsApp Bots, Webhooks, REST APIs

AI & Integration: OpenAI / ChatGPT API, Deepgram STT, AI Workflow Design, Prompt Engineering, Computer Vision

Languages: Python, JavaScript, TypeScript, SQL (basic), HTML, CSS

Frameworks & Tools: Next.js, React, Tailwind CSS, Git & GitHub, VS Code / Cursor, API Design, Debugging & Logs

EXPERIENCE

IT Support & Automation — Tier 1–2

2021 – 2025

[Info Station \(International Information Station, Inc.\)](#) — Remote, USA

- Co-designed an AI-powered Power Automate workflow that interprets, categorizes, and routes inbound service tickets — eliminating manual triage. The system has run reliably over time and remains in active use today.
- Rebuilt a long-time client's website (ARC of Washington Home Counties) from the ground up after a catastrophic failure, delivering a modern, fully functional site with a user-friendly backend the client could manage independently.
- Provided Tier 1–2 technical support to end users — troubleshooting hardware, software, and network issues via phone, email, and remote tools.
- Escalated complex incidents, documented resolutions, and contributed to an internal knowledge base; built strong root-cause analysis and communication skills under time pressure.

Independent Automation & AI Developer

2024 – Present

[Self-employed](#) — Remote

- Build and ship automation systems and AI-powered applications for real-world use cases (see Key Projects below), owning the full arc from problem to production.
- Operate an AI-native development workflow (Cursor, ChatGPT) to design, build, and debug solutions efficiently.

KEY PROJECTS

Automated Document Processing Pipeline

Power Automate • OCR • MS Exchange

- End-to-end automation that monitors an Exchange inbox for PDF attachments, extracts key data via OCR, renames and files documents by content — reducing manual processing time by ~80% and increasing consistency.

Real-Time Trade Signal Copier

Python • cTrader API • Automation

- Automation tool that parses unstructured Telegram trade signals into structured instructions (symbol, size, SL/TP) and executes them on cTrader with sub-100ms latency, with error logging to reduce manual mistakes.

AI-Powered WhatsApp Concierge

Python · ChatGPT API · JavaScript

- Smart assistant that reads incoming WhatsApp messages and drafts intelligent reply suggestions via the ChatGPT API, with a human-in-the-loop review step so the user always controls tone and final response.

Real-Time AI Co-Pilot & Interview Assistant

Next.js · OpenAI GPT-4o · Deepgram

- Real-time conversational assistant using Deepgram WebSockets for sub-100ms transcription and GPT-4o Vision for on-screen problem solving, with auto-pilot triggers, a STAR story bank, and post-session analysis.

AI Interactive Story Generator

Next.js · OpenAI API · TypeScript

- Multi-model AI automation orchestrating text and image generation into a single creative pipeline, with an animated UI and adjustable language/complexity controls.

EDUCATION

Associate Degree, Computer Technician

2014 – 2016

Sacred Heart Junior College — Belize

ADDITIONAL

- Completed the “Zero to Mastery” web development course (HTML, CSS, JavaScript fundamentals and basic web apps).
- Comfortable working fully remote, collaborating across time zones, and communicating clearly with non-technical stakeholders.
- Strong interest in AI-augmented automation and building tools that deliver measurable business results.
